

EduFlow — Technical Assessment Task 2

Candidate Submission Report & Deliverable Links | Candidate: Harsh

1. Deliverables & Resource Links

GitHub Repository:	https://github.com/Harsh9945/Assignment-Management
Working Demo Video:	https://drive.google.com/file/d/1MUETm5Hbiiz2wKYXwgF7FsGbTxGtxeT3/view?usp=sharing

2. Summary of Implemented Enhancements (Task 2)

- **UI/UX & Authentication Flow:** Implemented smooth JWT-based login/registration with inline form validation, loading spinners, and role-based redirection (Students to /dashboard, Professors to /admin/dashboard).
- **Course-Scoped Architecture:** Added multi-course support (CS101, SE302). Enrolled courses display in responsive grids with navigation to course-specific assignments (/courses/:courseId/assignments).
- **Submission Types (INDIVIDUAL vs GROUP):** Explicit submission mode badges. Individual assignments track single-student status; Group assignments enforce team-wide submission policies.
- **Atomic Group Leader Confirmation Fan-Out:** Group assignments restrict submission confirmation to the designated Group Leader (Aarav). Upon confirmation, an atomic PostgreSQL transaction updates submission status for all group members with confirmed_by attribution.
- **Professor Analytics & Management:** Admin dashboard displays total course enrollment, submission progress bars with smooth animations, status filtering (CONFIRMED vs PENDING), and assignment management.
- **Database Migrations & Test Suites:** Applied 002_courses.sql schema migration, updated seed_v3.js, and validated end-to-end functionality across 7 Jest test suites.

Status: All Task 2 requirements completed, verified with unit & integration tests, and pushed to GitHub.
